

CIA No. 2566
6 FEB 1964

Dr. Lessing A. Kahn
U.S. Arms Control and Disarmament Agency
718 Jackson Place, N. W.
Washington, D. C.

Dear Less,

We have reviewed Bendix Studies BSR 812, BSR 743, and BSR 827 and have prepared the attached comments on them.

Generally speaking, we find that the test outlines related to declared facilities and transportation are reasonable approaches to the problems involved. We are somewhat less favorable toward the outline for "undeclared" facilities but consider that slight changes in emphasis could cover our reservations.

It should be emphasized that our comments are not related to the general problem of evasion which is to be covered more specifically in a later Bendix Study.

When the specific details of the field test in BSR 812 (Declared Facilities) are being worked out, I would like to discuss the feasibility of including one of our intelligence analysts on the team which "inspects" Plant #5 (Martin/Denver--airframe and final assembly of liquid-fueled missiles).
